

Make a space rocket that flies to the moon

1. Cut out your space rocket and color it as you like
2. Place pipe cleaners on the bottom of the space rocket. Use glue or tape
3. Place small pieces of straw on the back of the space rocket at an angle that slopes slightly outwards. Use glue or tape
4. Pull a string of approx. 80 cm through the straws
5. Place a pin on a bulletin board and hang the space rocket on the pin, resting on the center of the string
6. Pull at the right and left ends of the string: NOW the space rocket will fly to the Moon!
