

# Bomb the city green!

## Ingredients

3 handfuls of soil

1 handful of clay powder

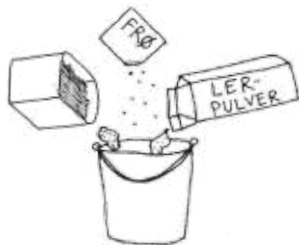

A small sprinkling of seeds

A little splash of water

### 1. Make the soil mixture

Mix soil and clay powder together well.

Add the seeds and spread them well in the mixture.

### 2. Add water

Add a small splash of water - a little at a time until the mixture reaches the right consistency. Be careful the soil does not get too wet. As with icing, it is difficult to get the bomb to set if there is too much wetness.

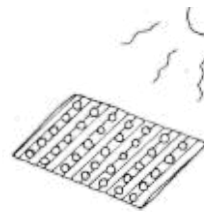

### 3. Roll the seed bombs

Now roll the seed bombs. They must have a diameter of approx. 2 cm. If the seed bombs get too big, the drying time will be too long and they may germinate prematurely.

### 4. Dry the seed bombs

Pack the seed bombs in a coffee filter and leave them to dry at home on a warm radiator or on a sunny windowsill. Place the seed bombs in your box.

### 5. Throw the seed bombs

In the spring, you can take a dry seed bomb with you on your trip and throw it on the ground in a place where there is a lack of color or flowers. It can also be in a pot on the windowsill.

### 6. Water freely

If it doesn't rain, please water where you have thrown your seed bombs - then the flowers will be much prettier.
